|-------------|

Being connected to your school is now easier and more enjoyable than ever before. With personalised and live information for students, parents, staff and prospective families, the School Live App and Platform serves your entire school community. We have developed mobile apps and web based communication platforms for the most recognised international schools around the world to help engage their school communities and optimise internal and external communication while reducing admin costs and time. The platform can work completely stand alone which means that you don't need any other communications solutions. However, if preferred, the app fully synchs with all your current systems like Student Information System, websites, blogs, Active Directory, social media and other edtech systems. We create custom apps with a unique look and feel and a specific set of features for your school which fosters bonding, admissions and increases the ROI on marketing.
